SKILL – 2

Creating a Zero Spend Budget in AWS

Search for Billing

Description: On the AWS Console Home page I typed "billing" in the search bar. From the results I opened Billing and Cost Management, where budgets are managed.

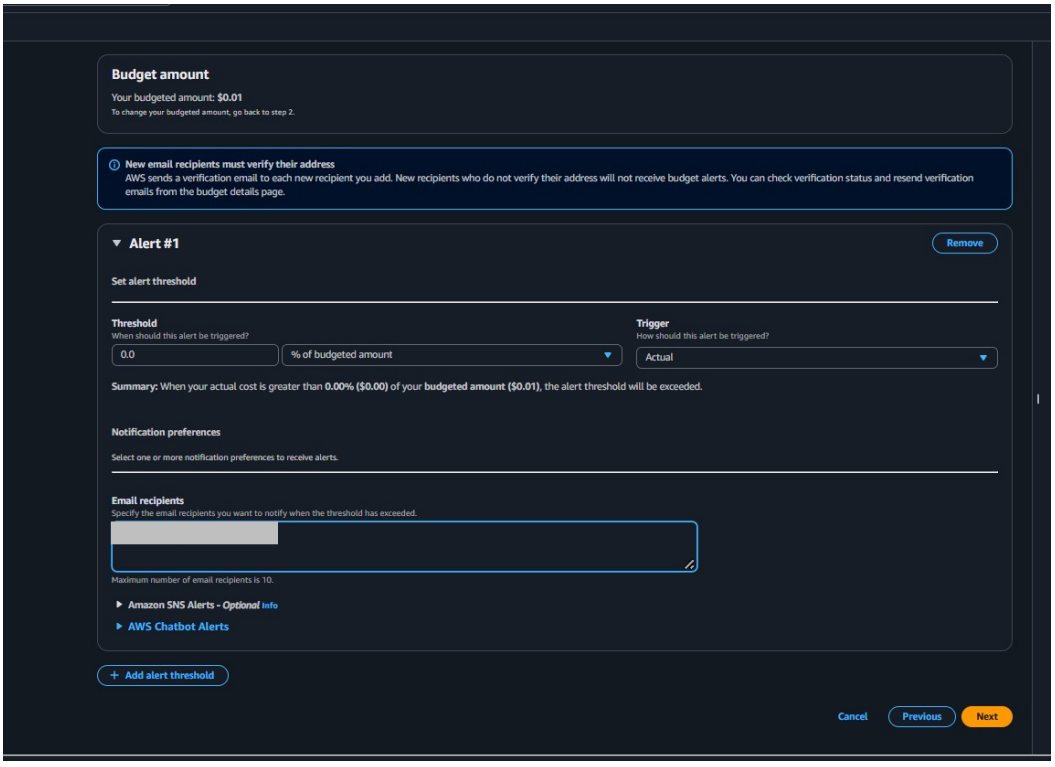

Choose Budget Type

Description: In Billing and Cost Management I went to Budgets and clicked Create budget. In Budget setup I chose Customize (advanced) and under Budget types I selected Cost budget (Recommended).

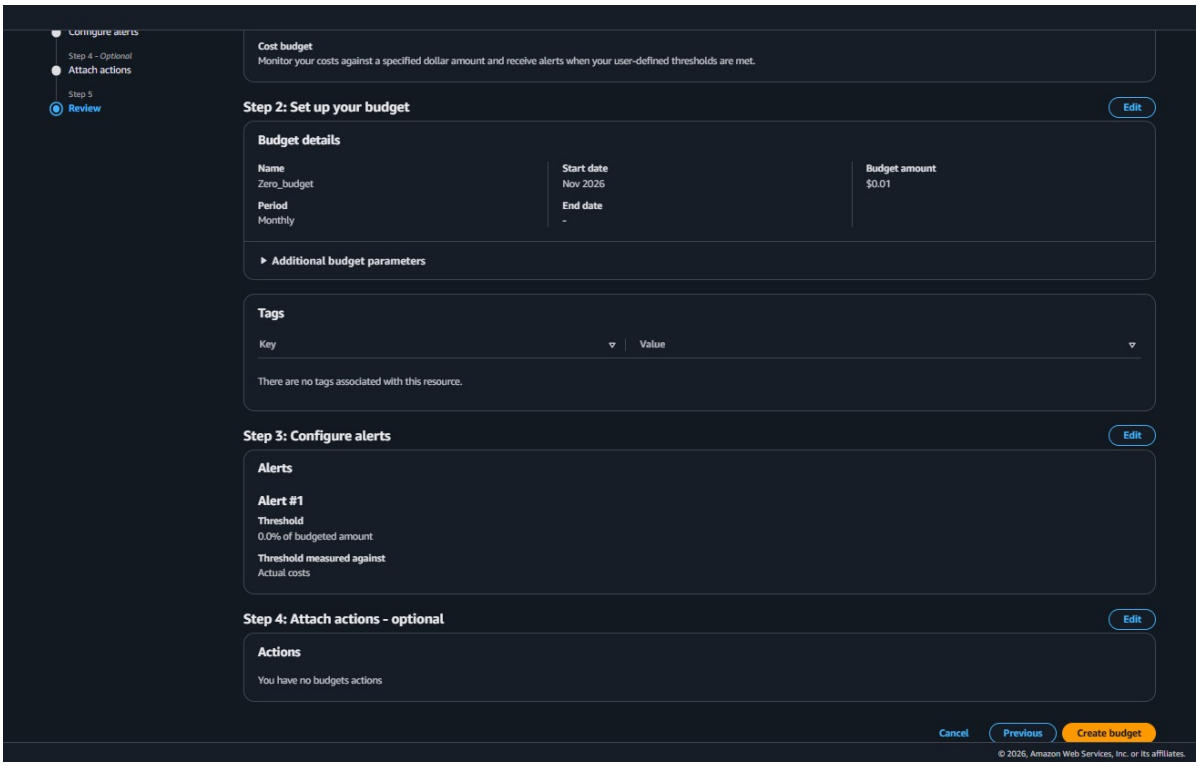

Set Your Budget

Description: I set the start month to Nov 2026 and kept the budgeting method as Fixed (one monthly amount). I entered 0.01 as the budgeted amount so I get notified on any spending, and kept the scope as All AWS services. I named the budget Zero_budget.

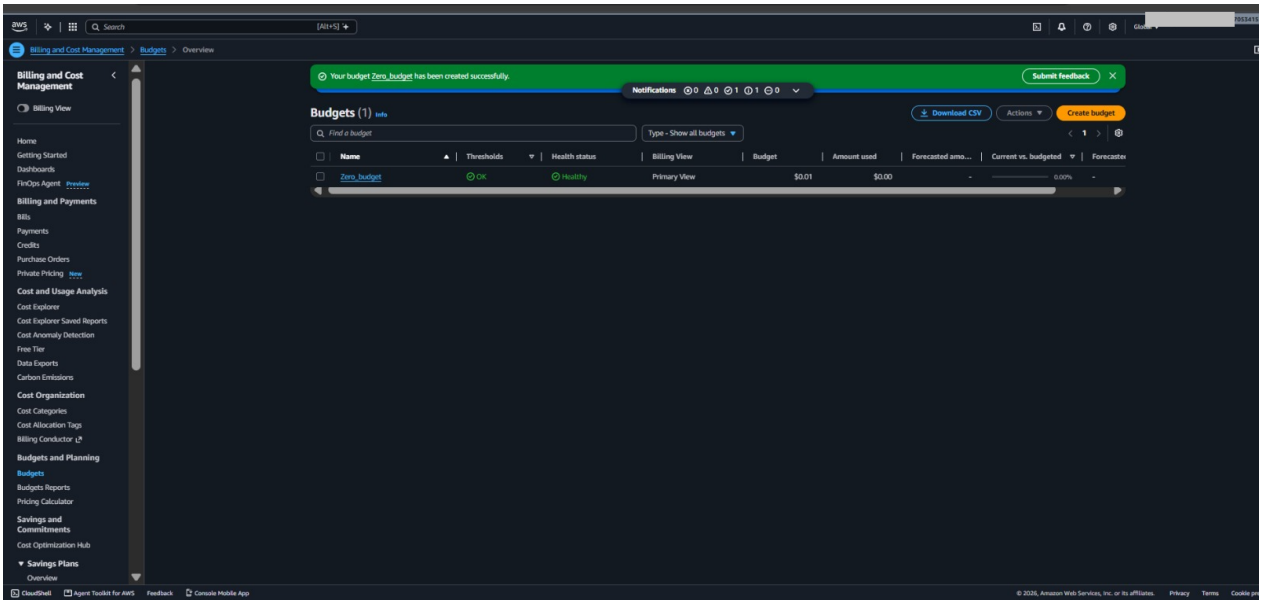

Configure Alerts

Description: In Alert #1 I set the threshold to 0.0% of budgeted amount with the trigger as Actual, so an alert goes out as soon as real cost crosses $0.00. I then entered my email address as the recipient. AWS sends a verification mail to new recipients, so I verified it.

Review the Budget

Description: On the Review page I checked everything: name Zero_budget, period Monthly, start date Nov 2026, budget amount $0.01, alert at 0.0% of actual costs, no tags and no actions. Then I clicked Create budget.

Budget Created

Description: AWS showed a green message saying Zero_budget was created successfully. It now appears in the Budgets list with status OK and Healthy, budget $0.01 and amount used $0.00.
